

## Management Analyst

### COMPANY AND JOB OVERVIEW

**Axela Biosciences Inc.** is an innovative service and product provider dedicated to supporting biomedical organizations including biopharma companies, diagnostic firms, and academic institutions. We provide reliable and best-in-class resources to meet customer needs at every stage — from sample collection to data analysis, discovery to development, and proof of concept to IND-enabling studies. We specialize in delivering tailored expertise packages and partnership strategies to support biopharma companies and startups, aiming to provide optimized solutions that advance biomedical innovations from lab to clinic.

We are seeking a highly motivated and energetic scientist who will work with us to design and execute experiments in multiple projects to gain insight into the activity of lead drugs and support efficient, data-driven translational development. Here, you can apply your scientific curiosity in Biology, Immunology, Oncology, Drug Discovery, or similar fields to pursue advances in biopharma research and contribute to studying the effectiveness of novel drug candidates in various projects.

### RESPONSIBILITIES

Analyze business processes & operational workflows in bio R&D to identify improvement, increased efficiency, & cost reduction. Conduct financial, market, & operational analyses to optimize management. Develop strategic plans, and gather & interpret data on performance, resource utilization, & laboratory operations for better efficiency. Conduct feasibility analyses for new R&D initiatives. Remote working from anywhere in the U.S. is required.

### Technical Skills Requirements:

- Strong understanding of preclinical research services, including discovery biology, translational science, and biomarker discovery.
- Familiarity with key therapeutic areas such as immunology and oncology, and with advanced assay platforms including flow cytometry, multiplex immunoassays, molecular profiling, NanoString nCounter, and GeoMx.
- Ability to confidently discuss scientific concepts and translate technical capabilities into tailored client solutions.
- Experience collaborating with scientific teams to design proposals and meet client objectives.
- Knowledge of GLP/GCLP principles and regulatory considerations for companion diagnostics is an advantage.

### Require skills:

- Biotech Management (Drug Discovery, Drug Development, Commercial Opportunity, Pricing & Reimbursement, Medical Device Industry, Diagnostics, Science to Startup, Corporate Development, Creating Stakeholder Value, Financing, Business Model, Specialty Pharma)
- Life Science knowledge and experience in flow cytometry, immunology, oncology, transcriptomics, in-vitro analysis, cell-based assays, biochemical assays, diagnostics.
- Familiar with HIPPA, PhRMA Code, AdvaMed Code, Physician Sunshine Payment Laws;

### EDUCATIONAL REQUIREMENTS

Master's degree in biotechnology management or MBA with a biotechnology concentration is required.

**Axela Biosciences** offers a technologically and scientifically rigorous environment and a highly competitive compensation. We can sponsor immigration visas if needed.
